Detailed Action

1. This Office Action is submitted in response to the RCE/Amendment filed 9-1-2010, wherein claims 1, 5, 10, 11 and 13 have been amended. Claims 1-5, 9-15, 17 and 19-21 are pending.

Examiners Response to Arguments

2. The examiner agrees with the arguments filed 9-1-2010 that the prior art cited in the previous Office Action fails to disclose the now claimed invention and the rejections therein are hereby withdrawn.

Allowable Subject Matter

3. Claims 1-5, 9-15, 17 and 19-21 are allowed

Examiner's statement of reasons for allowance

The following is an examiner's statement of reasons for allowance:

4. The prior art discloses a system and method for separately detecting both high and low energy secondary electrons that are generated by irradiation of a sample with a scanning electron microscope, where the high energy secondary electrons are detected by an "in-lens" detector (one that is located adjacent a lens), and the low energy electrons are detected by an "inner-lens" detector (one that is located within the electron optical column). See USPN 5,939,720; USPN 6,084,238 and USPN 6,635,873 all to Todokoro. The prior art also discloses using of a deflection apparatus in a scanning electron microscope to deflect the primary

electron beam around an inner-lens detector. (See USPN 6,730,907 to Feuerbaum and USPN 5,481,109 to Ninomiya). However, there is no motivation to combine these references since the combination would require substantial reconstruction and redesign of their elements, as well as changing the principle of operation under which they were designed to operate.

5. Claims 1 and 13 are allowed because the prior art fails to disclose a system and method for separately detecting both high and low energy secondary electrons that are generated by irradiation of a sample with a scanning electron microscope, where the division of the high energy secondary electrons and the low energy secondary electrons is controlled by modifying an electrostatic field such that the high energy secondary electrons are directed to an in-lens detector, and the low energy electrons are directed to an inner-lens detector, and wherein the scanning electron microscope includes a deflection apparatus that deflects the primary electron beam around the inner-lens detector.

6. Claims 2-5, 9-12, 14, 15, 17, and 19-21 are allowed by virtue of their dependency upon allowed claims 1 and 13.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
